

IMPORTANT

Please fully watch this lecture's video to understand how to handle the provided source files in this course

The course resources are provided via GitHub, the most popular hosting provider for programmers to efficiently manage coding projects. Besides that, GitHub also works as simple data storage as used in this course.

You **don't have to know GitHub to use the course resources**, the video explains all you need to know to conveniently use the course resources.

The page is structured as follows:

a) Landing page

<https://github.com/academind/power-bi-course-resources>

This page contains all source files (.csv, .xlsx, etc.) used in the course projects and the course slides shown in the theory modules.

b) Module pages

These contain the starting and finished project state of the course project(s) used in this module.

Additionally, snapshots of different states of the project within the course module can be found to compare your project with mine or to continue with the course in case something went wrong in your project.

01 - Getting Started => <https://github.com/academind/power-bi-course-resources/tree/01-getting-started>

02 - Understanding the Basics => <https://github.com/academind/power-bi-course-resources/tree/02-understanding-the-basics>

03 - Data Preparation Query Editor => <https://github.com/academind/power-bi-course-resources/tree/03-data-preparation-query-editor>

04 - Data Transformation Query Editor => <https://github.com/academind/power-bi-course-resources/tree/04-data-transformation-query-editor>

05 DAX & Relationships => <https://github.com/academind/power-bi-course-resources/tree/05-data-model-dax-and-relationships>

06 Creating Visuals => <https://github.com/academind/power-bi-course-resources/tree/06-creating-visuals-report-view>

07 Pro & Mobile => <https://github.com/academind/power-bi-course-resources/tree/07-pro-and-mobile>

Whenever you download a .pbix file, the path to the source file(s) used in the project must be updated.

This process is explained in this lecture's video and on the slides:

<https://github.com/academind/power-bi-course-resources/tree/main/slides/how-to-change-the-file-path>
